

On the Subject of Reporting Anomalies

There are four rooms, you just haven't reported a Camera Malfunction.

- Throughout the bomb, anomalies may appear in each of the rooms and it is your job to report them.
- The chance for an anomaly to appear between solves is between 30% and 40%.
- If the defuser allows for at least three active anomalies, there will be a warning alerting the defuser about the active anomalies. This will appear once, and never during the startup sequence.
- If all modules have been defused (with some exceptions) and there are no active anomalies, then the module will disarm.
- If there are multiple Reporting Anomalies modules present, then only one of them will be able to report potential anomalies.
- Extra Reporting Anomalies Modules will allow the defuser to use them as spare cameras, allowing them to view multiple rooms at once (at the cost of increased lag.)
